# RAAS Client۱

په دوو برخو جوړ شوی دی RAAS Client او RAAS Server. د سرورونو یا کوربه کمپیوترونو کنترول لپاره، RAAS Server د کوربه کمپیوترونو نصبولو ته اړتیا ده مخکې لدې چې د مراجعینو اړخ کې کوربه کمپیوترونه تنظیم کړئ د کارولو سره RAAS Client غوښتنلیکونه. دا برخه د نصبولو، تنظیم کولو او کارولو لپاره لارښوونې لري RAAS Client.

## ۱.۱ لگول

RAAS Client د RAASClient\_[version]\_x64.msi فایل داوڼلوډ کولو او په هدف کمپیوتر کې یې اجرا کولو سره نصب کیدی شي. که چیرې ډیفالټ نصب کول کافي وي نو یوازینی کړنې چې باید ترسره شي هغه د جواز تړون منل او د نصب کولو ټک کول دي.

د سیستم اړتیاوې: د ويندوز ۱۰ او ۱۱ پرو او انټرپرائز ۶۴ بت نسخه ملاتړ کوي. NET. چوکاټ ۴.۸ ته اړتیا ده.

## ۱.۱.۱ پرمختللي ترتيبات

که چیرې ډیفالټ نصب کول کافي نه وي، نو دا د نصبولو پرمهال د "پرمختللي" تنۍ په کلیک کولو سره تنظیم کیدی شي. لومړۍ برخه د ماشین په کچه د نصبولو لپاره اختیارونه لري، کوم چې به د ټولو کاروونکو لپاره د لاسرسي وړ وي، یا د کارونکي کچه، کوم چې به یوازې د

اوسني کارونکي لپاره د لاسرسي وړ وي. د "راتلونکي" کلیک کول به کارونکي د ځانگړتياو مینو ته راوړي. پدې برخه کې دا ممکنه ده چې په انټرفیس کې د ځانگړتياو فعالولو یا غیر فعالولو سره کوم ځانگړتیاوې نصب کړي. د ځانگړتیا توضیحات د بکس لاندې وړاندې کېږي چې کنټرولونه لري کله چې دا غوره کوي.

مشوره: RAAS Client دا د خبرتیا په آیکون کې د ښي کلیک کولو سره چلیدلی شي. د تل لپاره په ټاسک بار کې د خبرتیا آیکون ښودلو لپاره، په ټاسک بار کې پټ شوي آیکونونه وښایاست کلیک وکړئ او کش کړئ RAAS Client د لیدلو وړ شبیه ساحې ته د آیکون بدلول.

## ۱.۲ RAAS Server Configuration

RAAS Server Configuration د ستارټ مینو څخه پیل کیدی شي، د فایل اکسپلورر کې په سرور ښي کلیک کولو او "RAAS Server Configuration" یا د ښي کلیک کولو سره RAAS Client په سیستم تړې کې آیکون او یا هم "غوره کول RAAS Server Configuration" په روټ مینو کې یا د سرور مینو څخه په یوه کې. دا د هغو ترتیباتو تنظیم کولو لپاره کارول کېږي کوم چې باید د هر سرور لپاره پلي شي.

- سرورونه د سرور لیست بکس لخوا غوره کیدی شي، ترڅو د یو ځانگړي سرور لپاره ترتیب بدل کړي.
- د سرور اضافه کولو لپاره د "اضافه کړئ ..." تنۍ کلیک وکړئ، بیا د سرور نوم یا د سرور IP داخل کړئ او د "اضافه کړئ" تنۍ کلیک وکړئ.
- د یو سرور د لرې کولو لپاره هغه سرور غوره کړئ چې تاسو یې لرې کول غواړئ او د "لرې کړئ" تنۍ کلیک وکړئ.

ترتیب په تېونو کې تنظیم شوی، او د هر تب لاندې موجود ترتیبات په لاندې برخو کې وړاندې کېږي.

### ۱.۲.۱ عمومي

- **سرور فعال کړئ**: سرور فعالوي او د سرور ټولې ترتیبات پلي کوي. سرور باید فعال نه وي تر هغه چې ټولې ترتیبات تنظیم شوي نه وي.

ترتیبات:

- **عرف**: دا ټاکي چې سرور باید په ټولو کې کوم عرف ولري RAAS Client انټرفیسونه.
- **حساب**: د سرور سره د اړیکو لپاره د کارولو لپاره د ویندوز حساب ټاکي.
- **Password**: Determines the password to the windows account to use for communication with the server.
- **Domain**: Determines the domain for the windows account to use for communication with the server.
- **RDP authentication**: Determines which authentication rules to use when connecting though RemoteApp to the server, using the RDP protocol.
- **Auto reconnect**: Determines if RemoteApp should be reconnected to automatically if it was connected to before.

.lock, sleep or hibernate etc

**Autostart startup programs:** Determines if applications •  
which are configured to start automatically during startup  
on the server should start automatically through  
.RemoteApp when first connecting

**Keep alive agent:** Determines if a keep alive agent should •  
be started through RemoteApp on the server when first  
connecting, to prevent the connection from automatically  
.disconnecting when no applications are opened

**Redirect clipboard:** Determines if clipboard redirection •  
.should be on or off

**Redirect devices:** Determines if devices should be •  
redirected. This option requires additional settings to be  
.active, which are documented by Microsoft

**Redirect printers:** Determines if printer redirection •  
.should be on or off

**Show notifications:** Determines if the user should receive •  
a balloon tip notification when connecting or  
disconnecting RemoteApp. Notifications need to be  
.activated in Windows settings for notification to work

:Connection RAAS Server

**Status:** Displays information about the servers current •  
communication status. "No contact" indicates that no  
communication is present, "Contact" indicates that the  
server is reachable, "Available" indicates that  
communication with the RAAS Server service on the  
server is present and "Connected", which indicates that the  
.server is connected to through RemoteApp

**version:** This information is only present if **RAAS Server** •  
communication with the RAAS Server service on the  
server is present, and indicates the installed version of  
.RAAS Server on the server

**Connect/Reconnect-button:** Used to connect or reconnect •  
.to the server through RemoteApp

**Disconnect-button:** Used to disconnect the server from •  
.RemoteApp

## Remote Shortcuts 1.2.2

**Enable remote shortcuts:** Makes remote shortcuts active •  
.and applies all remote shortcuts settings

:Remote Shortcuts Settings

- **Create start-menu shortcuts:** Determines if start-menu shortcuts on the server should be transferred to the current user of the local computer, to be started through RemoteApp. Shortcuts will be placed in a dedicated folder in the start-menu with the name format [Server alias]
- **Create Windows Apps shortcuts:** Determines if Windows Apps shortcuts on the server should be transferred to the current user of the local computer, to be started through RemoteApp. Shortcuts will be placed in a dedicated folder in the start-menu with the name format [Server alias]. For Windows Apps shortcuts to be transferred after an installation Update Shortcuts need to be chosen for the .server from the RAAS Client notification area
- **Create desktop shortcuts:** Determines if desktop shortcuts on the server should be transferred to the current user of the local computer, to be started through .RemoteApp
- **Place desktop shortcuts on desktop root:** Determines if transferred desktop shortcuts from the server should be placed on desktop root of the current user. The alternative is to place them in a dedicated folder on the desktop with the name format [Server alias]
- **Append server alias to shortcut names:** Determines if shortcuts that are transferred from the server should be given names that are appended by the server alias
- **Server language for shortcut names:** Determines if shortcuts that are transferred from the server should be given names according to the installed language on the .server

## Visualizations 1.2.3

- **Enable visualizations:** Makes visualizations active and applies all visualizations settings

:Visualizations Settings

- **Main color:** Determines the main color to use for all .visualizations
- **Text color:** Determines the color of text used for all .visualizations
- **Line color:** Determines the color of lines used for all .visualizations
- **Frames:** Determines if RemoteApp windows for applications on the server should have a frame

- decorization. The frames can be used to indicate to the user which applications belong to the server
- Connection bar:** Determines if a connection bar should be present when a RemoteApp window for an application on the server is active. The connection bar can be used to indicate that an application on the server is receiving input
- Connection bar opacity:** If "Connection bar" is set, this setting determines the opacity of the connection bar

## File Explorer Extension 1.2.4

- Enable in File explorer extension:** Makes the server visible in the RAAS Client File explorer extension and applies all effective RAAS Client File explorer extension settings

Visible Folders: Use these options to determine which user folders that should be visible for the server in the File explorer extension

Visible Devices and Drives: Use these options to determine which types of devices and drives that should be visible for the server in the File explorer extension

## RAAS Client 1.3

The RAAS Client application is reached through its system tray icon.

When right-clicking the icon in system tray a context menu will appear. The menu items of this context menu will be described in this section

- Remote Desktop:** Opens the RAAS Client Remote Desktop application, with no server selected
- Opens the RAAS Server" :RAAS Server Configuration** : Configuration application, with no server selected
- .Help (pdf):** Opens a pdf with help concerning RAAS
- About:** Opens a window with information about the RAAS Client installed
- .RAAS Client Exit:** Closes

The context menu contains one sub menu for each enabled server. A red circle before the server name indicates that the server is offline, a yellow circle before the server name indicates that the server is available and a green circle before the server name indicates that a connection through RemoteApp to the server exist

:Server sub context menu

- **Connect:** Creates a connection to the server through .RemoteApp
- **.Disconnect:** Disconnects the server from RemoteApp
- **Reconnect:** Reconnects the RemoteApp connection to the .server
- **.Loggoff:** Logs out all logged in users from the server
- **.Reboot:** Reboots the server
- **Update Shortcuts:** Updates all remote shortcuts from server. This action is required when installing Windows .Apps shortcuts
- **Remote Desktop:** Opens the "RAAS Client Remote .Desktop" application with the server selected
- **RAAS Server Configuration** Opens the "RAAS Server :RAAS Server Configuration" application with the server selected

## File Explorer RAAS Client 1.4 Extension

If shell namespace extension is installed for ,RAAS Client there will be a section in File explorer called "RAAS Client" in the treeview of File explorer root level. This section can be used to handle files and folders for each server which has File explorer extension active in settings. It is designed to function just as normal handling of files and folders in File Explorer, with some additional options which are .described in this section

:Right-clicking a server

- **Remote Desktop:** Opens the RAAS Client Remote" .Desktop application with the server selected
- **RAAS Server Configuration** Opens the "RAAS Server :RAAS Server Configuration" application with the server selected

:Right-clicking a file

- **Open on remote host:** Opens the file on the remote host .through RemoteApp
- **Create remote shortcut:** Creates a shortcut which starts the file on the server through RemoteApp when activated. .The file is created in the current folder

Right-clicking a file and dragging it to another location before :release

**Create remote shortcut here:** Creates a shortcut which •  
starts the file on the server through RemoteApp when  
activated. The file is created in the location which the file  
.was dragged to

## RAAS Client Remote Desktop 1.5

can be started by right-clicking a "RAAS Client Remote Desktop"  
server in the File explorer extension and choosing "Remote  
Desktop" or by right-clicking the RAAS Client icon in system tray and  
either choosing "Remote Desktop" in the root menu or in one of the  
server menus. It is used to connect to a server with remote desktop  
RAAS using the stored credentials, which can be configured using  
.Server Configuration

**Server:** Choose the server to connect to using remote •  
.desktop

:Settings

**RDP authentication:** Determines which authentication •  
rules to use when connecting though remote desktop to  
.the server, using the RDP protocol

**Redirect clipboard:** Determines if clipboard redirection •  
.should be on or off

**Redirect devices:** Determines if devices should be •  
redirected. This option requires additional settings to be  
.active, which are documented by Microsoft

**Redirect printers:** Determines if printer redirection •  
.should be on or off

**Fullscreen:** Determines if remote desktop should be •  
.started in fullscreen mode

**Connection bar:** Determines if a connection bar should be •  
.present in fullscreen mode

**Pin connection bar:** Determines if the connection bar •  
.should be pinned initially

**Dektop width:** Determines the desktop width for the •  
.remote desktop session

**Desktop height:** Determines the desktop height for the •  
.remote desktop session

## Search & Run 1.6

provides an easy way to search for installed Search & Run  
applications on the server and then run the applications. It is

installed on the server but is intended to be used as a RemoteApp application through RAAS Client on the client computer. It functions as a replacement for Windows search, which is not accessible through RAAS Client. Searching for files is performed by looking for files which begin with the provided string in the search field. "\*" in the string matches any string and "?" in the string matches any .character

## RAAS Server 2

In order to control servers, or host computers, through RAAS .Client , RAAS Server needs to be installed on the host computers

### Installation 2.1

is installed by downloading RAAS Server RAASServer\_[version]\_x64.msi to a server, or host computer, and opening the file. If default installation is sufficient the only actions which need to be taken is accepting the licence agreement and .hitting install

In order use RAAS Server from a RAAS Client computer, you need to login once through the desktop interface once the program is installed with the user you wish to control the server with through .RemoteApp

System requirements: Supports 64 bit versions of Windows 10 & 11 Pro and Enterprise as well as Windows Server RDS. .NET .Framework 4.8 and .NET 8 are both needed

### Advanced settings 2.1.1

If default installation is inadequate, it can be customized by clicking the "Advanced" button when installing. In this section it is possible to choose which features to install by enabling or disabling features in the interface. Details of a feature is presented underneath the box .containing the controls when selecting it

If installed on Windows Server for RDS access it is •  
recommended to disable the ability to reboot the server from the RDS clients. This can be configured by clicking the "Advanced" button on the installation and selecting "Entire feature will be unavailable" for the feature named .""Can Reboot

## Recommended Windows 2.2 configuration

- It is recommended to allow password protected authentication to the computer shares on the server to allow access through the RAAS Client File explorer extension on the client computer. Documentation to provide password protected authentication to the computer shares on the server is documented by .Microsoft
- It is recommended to disable User Account Control, UAC, on the server to be able to install programs on the server through RAAS Client RemoteApp. User Account Control and privilege escalation are not supported by RAAS Client RemoteApp. Documentation to .disable User Account Control is provided by Microsoft
- Remote desktop connections need to be allowed on the .RAAS Client server for Microsoft RemoteApp to work with
- communicates with RAAS Server through port RAAS Client 43000, this port need to be allowed through firewalls. An entry in Windows firewall is automatically created on .RAAS Server installation of
- An initial connect to the server with the user you wish to control the server with through RemoteApp is required for .shortcuts to be created
- If used with connection bar from RAAS Client, it is recommended to disable the Multi-tasking setting "Show snap layouts when I drag a window to the top of my screen", which is accessible in Windows system settings. That function comes in conflict with the RAAS Client connection bar when used simultaneously. Changing this will make the remote applications run more .smoothly

## Search & Run 2.3

provides an easy way to search for installed Search & Run applications on the server and then run the applications. It is installed on the server but is intended to be used as a RemoteApp application through RAAS Client on the client computer. It functions as a replacement for Windows search, which is not accessible RAAS Client. Searching for files is performed by looking for files which begin with the provided string in the search field. "\*" in the string .matches any string and "?" in the string matches any character

# Versioning 3

New versions of RAAS Client and RAAS Server should be published at the same time with the same version number corresponding to the version tag in GitHub. RAAS Client and RAAS Server should be compatible as long as the major version number is the same i.e. the .first of the numbers in the file names

## Support 4

### Common issues 4.1

File explorer may take longer time to start due to network locations being automatically added to quick access by Windows. In that case .the problem will occur if the network location is unreachable

To resolve: Change open location for File explorer setting •  
."from "Home" to "This PC
